

## **TempTale Manager Desktop (TTMD) 4.2**

TempTale Manager Desktop 4.2 is a US and International release of software that displays a user interface (UI) that is in accordance with the user's locale. TTMD is an easy-to-use, powerful PC-based Windows application for configuring, downloading, displaying, analyzing and printing time and temperature data in Graph, Tabular and Summary formats. The enhanced user-friendly interface provides users with greater flexibility when downloading, displaying, saving, printing and exporting of trip data.

### **Features and Benefits**

- » Validated software with software validation manual
- » Supported operating systems include Windows XP/2000/NT 4.0
- » Automatically print graphical, tabular or summary views of data
- » Tamper proof files to ensure integrity of electronic records
- » Fast and reliable serial or USB port communications
- » Software automatically configures communications port for Interface Plus monitor reader
- » E-mail a saved data file as an attachment directly from the TTM Desktop application
